

# Rehabilitation of the Body Ponds Watershed

## PROBLEMS

- Invasive species - Lemon Grass
- Extensive fires
- Reduced water quality
- Soil erosion and soil exhaustion
- Reduced coastal water quality
- Reduced productivity in fisheries

## PROJECT AIMS

- Survival of remaining biodiversity
- Control and remove the Lemon Grass
- Control fires
- Reforest the watershed with native and indigenous species
- Promote sustainable farming practices
- Increase water attraction and retention
- Increase biodiversity
- Reduce erosion and runoff
- Increase potential as a tourist amenity
- Improve the management of this watershed and other watersheds in Antigua and Barbuda
